WEF/ABC Certification Study Guides

These Guides are designed to help operators prepare to take their certification exams. Suggested study topics and sample exam questions are provided for varying levels of difficulty. The topics and questions are grouped according to ABC's Need to Know criteria, which helps operators who will be taking an ABC exam. Additionally, it allows operators taking non-ABC exams to cross-reference their Need to Know criteria to ABC's and identify the areas they need to focus on. All questions are referenced to WEF books and include feedback on correct answers. Math problem calculations are shown.

WEF/ABC Wastewater Laboratory Analysts' Guide to Preparing for Certification Exam
